CC -1- FUNCTION: Alpha-conotoxins act on postsynaptic membranes, they  
CC bind to the nicotinic acetylcholine receptors (nAChR) and thus  
CC inhibit them. It is highly active against the neuromuscular  
CC receptor in frog but not in mice. In contrast, it induces seizures  
CC in rats.  
CC when injected centrally in mice and rats. It targets neuronal  
CC nAChRs in mammals. It blocks homomeric alpha-7 nicotinic receptors  
CC with the highest apparent affinity and homomeric alpha-9 receptors  
CC with 8-fold lower affinity. It has no effect on receptors composed  
CC of alpha-2/beta-2, alpha-3/beta-2, alpha-4/beta-2, alpha-2/beta-4,  
CC alpha-3/beta-4, or alpha-4/beta-4 subunit combinations.  
CC -1- SUBCELLULAR LOCATION: Secreted.

XX  
XX Sequences AAB72246 - AAB72275 represent peptides derived from colostrinin,  
CC a proline rich polypeptide aggregate contained in colostrum. The  
CC peptides have immune response modulatory activity, and are capable of  
CC inducing cytokines. Colostrinin and its derived peptides are useful for  
CC inducing cytokine production, for modulating an immunological response  
CC and for inducing blood cell proliferation. The peptides are useful in the  
CC treatment of disorders of the central nervous system, neurological  
CC disorders, mental disorders, dementia, neurodegenerative diseases,  
CC Alzheimer's disease, motor neuron disease, psychosis, neurosis, chronic  
CC disorders of the immune system, bacterial and viral infections and  
CC acquired immunological deficiencies.

CC after a premature birth or normal birth, preventing/delaying aging in a  
 CC patient, enhancing wound healing, and the reduction of side effects of  
 CC cosmetic procedures. The method changes the level of an oxidizing species  
 CC in the cell, such as decreases or prevents increase in the level of  
 CC damage to a biomolecule of the patient selected from DNA, protein and/or  
 CC lipid, compared to the same conditions when the oxidative stress  
 CC regulator is not present. The modulation of oxidative stress results in  
 CC enhanced repair, regeneration, and replacement of cells, tissues and  
 CC organs (e.g. kidney, liver, pancreas, skin, and the other internal and  
 CC external organs), as well as enhanced preservation of such organs for  
 CC transplantation, implantation, or scientific research. The present  
 CC sequence is a colostrinin constituent peptide.

XX Modulation of blood cell proliferation in a patient involves use of  
 PT blood cell regulator selected from colostrinin, its constituent peptide  
 PT and/or analogue

PS Claim 1; Page 34; 54pp; English.

XX The present sequence is that of a colostrinin constituent peptide  
 CC that is used as an immunological regulator and as a blood cell  
 CC regulator in claimed methods of the invention. Methods are  
 CC claimed for: inducing a cytokine in a cell by contact with an  
 CC immunological regulator, where the cell is present in a cell  
 CC culture, a tissue, an organ or an organism, and the cell is  
 CC mammalian, including human; modulating an immune response in a cell  
 CC by contact with the immunological regulator under conditions  
 CC effective to induce a cytokine; modulating an immune response in a

CC patient by administering an immunological regulator under conditions  
 CC effective to induce a cytokine, where the immunological regulator  
 CC is administered topically or as part of a dietary supplement, and  
 CC where the immune response is specific or non specific, an interferon  
 CC response or an antibody response; modulating blood cell proliferation  
 CC by contacting blood cells with a blood cell regulator, where the  
 CC blood cells are present in a cell culture or an organism, are  
 CC mammalian or human, and where the blood cells are increased in  
 CC number or differentiated; and a method for modulating blood cell  
 CC proliferation in a patent. A claimed cytokine-inducing composition  
 CC comprises a pharmaceutical carrier and an active agent such as the  
 CC present peptide.

XX Promoting cell differentiation in a patient involves use of blood cell  
 PT regulator selected from colostrinin, its constituent peptide and/or  
 PT analog

XX Claim 7; Page 21; 37pp; English.

XX The invention comprises a method for promoting cell differentiation (e.g.  
 CC neural cell differentiation). The method involves contacting cells with a  
 CC neural cell regulator (i.e. a colostrinin peptide) in order to change the  
 CC cells in morphology to form neural cells. Colostrinin is a proline-rich  
 CC polypeptide aggregate that is present in colostrum. The method of the  
 CC invention is useful for promoting the differentiation of cells and for  
 CC treating damaged neural cells in a patient. The present amino acid  
 CC sequence represents a specifically claimed colostrinin peptide used in  
 CC the method of the invention.

XX New composition comprising a substance that modulates the structure of
PT proteins and polynucleotides, useful for therapeutic, prognostic and
PT diagnostic reagents for eliciting cellular or humoral immune response
PT in cancer patients
XX Claim 13; Page 403; 1021pp; English.
XX The present invention relates to novel human cancer-related genes and
CC proteins (ABZ78120-ABZ78168 and ABR01789-ABR01861). The genes and
CC proteins are useful for eliciting a humoral or cellular immune response.
CC The genes are useful as probes and primers for the amplification and/or
CC detection of genes, mRNAs or their fragments, as reagents for the
CC diagnosis and/or prognosis of cancer, as coding sequences capable of
CC directing the expression of the protein, as tools for modulating or
CC inhibiting the expression of genes and/or translation of transcripts, and
CC as therapeutic agents. The proteins and peptides are useful as
CC therapeutic, prognostic and diagnostic reagents for cancer. The present
CC sequence is a human leukocyte antigen (HLA) peptide, used in an example
CC from the invention.

XX New composition comprising a substance that modulates the structure of
PT proteins and polynucleotides, useful for therapeutic, prognostic and
PT diagnostic reagents for eliciting cellular or humoral immune response
PT in cancer patients -
XX Claim 13; Page 412; 1021pp; English.
XX The present invention relates to novel human cancer-related genes and
XX proteins (ABZ78120-ABZ78168 and ABR01789-ABR01861). The genes and
XX proteins are useful for eliciting a humoral or cellular immune response.
XX The genes are useful as probes and primers for the amplification and/or
XX detection of genes, mRNAs or their fragments, as reagents for the
XX diagnosis and/or prognosis of cancer, as coding sequences capable of
XX directing the expression of the protein, as tools for modulating or
XX inhibiting the expression of genes and/or translation of transcripts, and
XX as therapeutic agents. The proteins and peptides are useful as
XX therapeutic, prognostic and diagnostic reagents for cancer. The present
XX sequence is a human leukocyte antigen (HLA) peptide, used in an example
XX from the invention.

PT proteins and polynucleotides, useful for therapeutic, prognostic and

PT diagnostic reagents for eliciting cellular or humoral immune response

PT in cancer patients

XX Claim 13; Page 413; 1021pp; English.

PS The present invention relates to novel human cancer-related genes and

CC proteins (ABZ78120-ABZ78168 and ABR01789-ABR01861). The genes and

CC proteins are useful for eliciting a humoral or cellular immune response.

CC The genes are useful as probes and primers for the amplification and/or

CC detection of genes, mRNAs or their fragments, as reagents for the

CC diagnosis and/or prognosis of cancer, as coding sequences capable of

CC directing the expression of the protein, as tools for modulating or

CC inhibiting the expression of genes and/or translation of transcripts, and

CC as therapeutic agents. The proteins and peptides are useful as

CC therapeutic, prognostic and diagnostic reagents for cancer. The present

CC sequence is a human leukocyte antigen (HLA) peptide, used in an example

CC from the invention.

PS Claim 13; Page 416; 1021pp; English.

The present invention relates to novel human cancer-related genes and proteins (ABZ78120-ABZ78168 and ABR01789-ABR01861). The genes and proteins are useful for eliciting a humoral or cellular immune response. The genes are useful as probes and primers for the amplification and/or detection of genes, mRNAs or their fragments, as reagents for the diagnosis and/or prognosis of cancer, as coding sequences capable of directing the expression of the protein, as tools for modulating or inhibiting the expression of genes and/or translation of transcripts, and as therapeutic agents. The proteins and peptides are useful as therapeutic, prognostic and diagnostic reagents for cancer. The present sequence is a human leukocyte antigen (HLA) peptide, used in an example from the invention.

 CC The present invention relates to novel human cancer-related genes and  
 CC proteins (ABZ78120-ABZ78168 and ABR01789-ABR01861). The genes and  
 CC proteins are useful for eliciting a humoral or cellular immune response.  
 CC The genes are useful as probes and primers for the amplification and/or  
 CC detection of genes, mRNAs or their fragments, as reagents for the  
 CC diagnosis and/or prognosis of cancer, as coding sequences capable of  
 CC directing the expression of the protein, as tools for modulating or  
 CC inhibiting the expression of the protein, as tools for translation of transcripts, and  
 CC as therapeutic agents. The proteins and peptides are useful as  
 CC therapeutic, prognostic and diagnostic reagents for cancer. The present  
 CC sequence is a human leukocyte antigen (HLA) peptide, used in an example  
 CC from the invention.

 PS  
 XX The present sequence represents an analogue of a peptide hormone named  
 CC trypsin modulating oostatic factor (TMOF). Mosquitoes regulate trypsin  
 CC and trypsin-like enzymes with this hormone to conserve metabolic  
 CC energy. Other insect pests use it for the same purpose. The peptide  
 CC functions as a pesticidal compound, which inhibits digestion in pests by  
 CC inhibiting synthesis of pests digestive enzymes. The pesticidal  
 CC compound is useful for preventing, reducing or eliminating infestation  
 CC of geographical areas by an insect population such as flesh flies, fleas,  
 CC sand flies, house flies and dog flies. The pesticidal compound is applied  
 CC to pest inhabited loci of the geographical area such as the body of  
 CC water inhabited by mosquito larvae, or insects such as coleopterans,  
 CC lepidopterans, dipterans or blood-sucking insects of order Diptera,  
 CC suborder Nematocera, family Colicidae or subfamily Culicinae,  
 CC Corethrinae, Ceratopogonidae and Simuliidae.

PT Src homology region 3 binding peptide - used to activate Src  
 PT tyrosine kinase(s) and to stimulate immune response by increasing  
 PT production of certain lymphokine(s), e.g. interleukin-1  
 XX  
 XX  
 PS Claim 22; Page 94; 131pp; English.  
 XX  
 CC The present sequence represents a peptide which resembles a Src homology  
 CC region 3 (SH3) binding peptide. SH3 binding peptides are selected from:  
 CC (a) peptides which bind the SH3 domain of Cortactin; (b) peptides which  
 CC bind the middle SH3 domain of Nck; (c) peptides which bind the SH3  
 CC domain of Abl; (d) peptides which bind the SH3 domain of Src; (e)  
 CC peptides which bind the SH3 domain of PLC gamma; (f) peptides which bind  
 CC the SH3 domain of p53bp2; (g) peptides which bind the amino-terminal SH3  
 CC domain of Crk; (h) peptides which bind the SH3 domain of Grb2. The purified  
 CC peptides which bind the amino-terminal SH3 domain of Grb2. The purified  
 CC binding peptides can be used in the method to identify inhibitors of  
 CC their binding to their respective SH3 domains, which could be used to  
 CC modulate the pharmacological activity of proteins or polypeptide  
 CC containing the SH3 domain. The peptides can also be used to activate  
 CC Src or Src-related protein tyrosine kinases, to stimulate the immune  
 CC response by increasing the production of certain lymphokines, e.g.  
 CC tumour necrosis factor-alpha and interleukin-1, or to deliver a  
 CC conjugated molecule to certain cellular compartments containing Src or  
 CC Src related proteins.

XX PS Disclosure; Page 36; 63pp; English.
XX CC This sequence is shown in the specification. The invention relates to a
XX novel polypeptide which comprises 3-20 amino acids, or a peptidomimetic
XX analogue of it where the analogue is at least partly non-peptide in
XX nature and the analogue has a length equivalent to that determined by
XX 3-20 amino acid residues, which is a sequence not naturally occurring in
XX the native sequence of the Herpes simplex virus glycoprotein G (HSV-2 gG
XX protein), and has one of the following sequences: (X)n- alpha - beta -
XX gamma - (Y)m (I); or (X)n- delta - epsilon - theta - (Y)m (II); n = 0 or an
XX integer; m = 0 or an integer; n+m at most 17; alpha is E or may be
XX substituted in order of preference by D greater than T greater than S
XX greater than Q greater than N; beta is H; gamma is R or may be
XX substituted in order of preference by R greater than A or L greater than
XX T or P; epsilon is P; theta is L or may be substituted in order of
XX preference by B or Y; and X or Y are positively charged, negatively
XX charged or neutral amino acids or peptidomimetics thereof. The
XX polypeptide can be used in vaccine compositions, which can be used to
XX prevent HSV-2 infection. It can also be used to test for the presence
XX of type-specific HSV-2 gG2 antibodies in a fluid. This test can be used
XX to diagnose HSV-2 infection.

Modified phage display library depleted in phage that react with  
native cellular proteins - provides reduced noise and higher  
signal-to-noise ratio when screened against cells transfected to  
express a specific heterologous protein, used to identify potential  
therapeutic and diagnostic agents

Example 1; Page 30; 49pp; English.

The invention relates to a modified phage library for use with a selected  
strain of cells that have been transformed to express a heterologous  
protein (I) in a screening procedure, to detect specific binding between  
individual phage and a recognition site on the heterologous protein. The  
modified library is produced as follows. The initial phage library is  
fractionated by contact with strain of cells that do not express (I) to  
bind any phage that bind to cellular proteins other than the (I). Bound  
and unbound phages are separated to produce the modified library.  
The library is depleted in components that bind to cell-surface associated (I),  
used to identify phage that bind to cell-surface associated (I),  
specifically receptors. Peptides identified by screening with the  
modified library are potentially useful as therapeutic and diagnostic  
agents, for diseases involving (I) or its ligands (including as carriers  
for delivering drugs, toxins or antibodies to cells), and their amino  
acid sequences can be used to design other agents for the same uses. The  
initial fractionation eliminates much of the noise caused by binding to  
other cell-surface proteins, and the use of transfected cells for  
screening (these express a far greater number of (I) than wild-type  
cells) improves the signal-to-noise ratio. The number of rounds of  
screening may thus be reduced.

XX Composition useful for the modulation of blood cell proliferation in a  
PT patient comprises a blood cell regulator selected from colostrinin, its  
PT constituent peptide and/or analog -  
XX  
XX Claim 6; Page 25; 51pp; English.

XX The invention relates to a composition which comprises a blood cell  
CC regulator selected from colostrinin, its constituent peptide and/or  
CC analogue. The invention is used for modulating the oxidative stress  
CC level in a cell e.g. mammalian or human cell present in a cell culture,  
CC tissue, organ, or organism; or for treating oxidative damage to the skin  
CC of a patient e.g. animal or human; to modulate oxidative stress during/  
CC after a premature birth or normal birth, preventing/delaying aging in a  
CC patient, enhancing wound healing, and the reduction of side effects of  
CC cosmetic procedures. The method changes the level of an oxidising species  
CC in the cell, such as decreases or prevents increase in the level of  
CC damage to a biomolecule of the patient selected from DNA, protein and/or  
CC lipid, compared to the same conditions when the oxidative stress  
CC regulator is not present. The modulation of oxidative stress results in  
CC enhanced repair, regeneration, and replacement of cells, tissues and  
CC organs (e.g. kidney, liver, pancreas, skin, and the other internal and  
CC external organs), as well as enhanced preservation of such organs for  
CC transplantation, implantation, or scientific research. The present  
CC sequence is a colostrinin constituent peptide.

XX Modulation of blood cell proliferation in a patient involves use of  
PT blood cell regulator selected from colostrinin, its constituent peptide  
PT and/or analogue -  
XX  
XX Claim 1; Page 34; 54pp; English.  
XX The present sequence is that of a colostrinin constituent peptide  
CC that is preferred for use as an immunological regulator and as a

CC blood cell regulator in claimed methods of the invention. Methods  
CC are claimed for: inducing a cytokine in a cell by contact with an  
CC immunological regulator, where the cell is present in a cell  
CC culture, a tissue, an organ or an organism, and the cell is  
CC mammalian, including human; modulating an immune response in a cell  
CC by contact with the immunological regulator under conditions  
CC effective to induce a cytokine; modulating an immune response in a  
CC patient by administering an immunological regulator under conditions  
CC effective to induce a cytokine, where the immunological regulator  
CC is administered topically or as part of a dietary supplement, and  
CC where the immune response is specific or non specific, an interferon  
CC response or an antibody response; modulating blood cell proliferation  
CC by contacting blood cells with a blood cell regulator, where the  
CC blood cells are present in a cell culture or an organism, are  
CC mammalian or human, and where the blood cells are increased in  
CC number or differentiated; and a method for modulating blood cell  
CC proliferation in a patent. A claimed cytokine-inducing composition  
CC comprises a pharmaceutical carrier and an active agent such as the  
CC present peptide. Cytokines induced by this peptide in human  
CC leucocyte cultures include interferon-gamma, tumour necrosis  
CC factor-alpha, interleukin-4, interleukin-6 and interleukin-10.

CC The invention comprises a method for promoting cell differentiation (e.g.  
CC neural cell differentiation). The method involves contacting cells with a  
CC neural cell regulator (i.e. a colostrinin peptide) in order to change the  
CC cells in morphology to form neural cells. Colostrinin is a proline-rich  
CC polypeptide aggregate that is present in colostrum. The method of the  
CC invention is useful for promoting the differentiation of cells and for  
CC treating damaged neural cells in a patient. The present amino acid  
CC sequence represents a specifically claimed colostrinin peptide used in  
CC the method of the invention.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

CC -1- FUNCTION: UBIQUITIN-PROTEIN HYDROLASE IS INVOLVED BOTH IN THE
CC PROCESSING OF UBIQUITIN PRECURSORS AND OF UBIQUINATED PROTEINS.
CC THIS ENZYME IS A THIOL PROTEASE THAT RECOGNIZE AND HYDROLYZE
CC A PEPTIDE BOND AT THE C-TERMINAL GLYCINE OF UBIQUITIN.
CC -1- CATALYTIC ACTIVITY: Ubiquitin C-terminal thiolester + H(2)O =
CC ubiquitin + a thiol.
CC -1- SUBCELLULAR LOCATION: Cytoplasmic.
CC -1- SIMILARITY: BELONGS TO PEPTIDASE FAMILY C12.

RT "Plant mitochondrial pyruvate dehydrogenase complex: purification and  
identification of catalytic components in potato.";  
RL Biochem. J. 334:571-576(1998).  
CC -I- FUNCTION: The pyruvate dehydrogenase complex catalyzes the overall  
conversion of pyruvate to acetyl-CoA and CO(2). It contains  
multiple copies of three enzymatic components: pyruvate  
dehydrogenase (E1), dihydrolipoamide acetyltransferase (E2) and  
lipoamide dehydrogenase (E3).  
CC -I- CATALYTIC ACTIVITY: Pyruvate + lipoamide = S-  
acetyldihydrolipoamide + CO(2).  
CC -I- COFACTOR: THIAMINE PYROPHOSPHATE.  
CC -I- SUBUNIT: Tetramer of two alpha and two beta subunits (by  
similarity).  
CC -I- SUBCELLULAR LOCATION: Mitochondrial matrix.

 DR  
 XX Peptides having an N-terminal amino acid sequence isolated from

CC after a premature birth or normal birth, preventing/delaying aging in a  
 CC patient, enhancing wound healing, and the reduction of side effects of  
 CC cosmetic procedures. The method changes the level of an oxidizing species  
 CC in the cell, such as decreases or prevents increase in the level of  
 CC damage to a biomolecule of the patient selected from DNA, protein and/or  
 CC lipid, compared to the same conditions when the oxidative stress  
 CC regulator is not present. The modulation of oxidative stress results in  
 CC enhanced repair, regeneration, and replacement of cells, tissues and  
 CC organs (e.g. kidney, liver, pancreas, skin, and the other internal and  
 CC external organs), as well as enhanced preservation of such organs for  
 CC transplantation, implantation, or scientific research. The present  
 CC sequence is a colostrinin constituent peptide.

XX Modulation of blood cell proliferation in a patient involves use of  
 PT blood cell regulator selected from colostrinin, its constituent peptide  
 PT and/or analogue -

PS Claim 1; Page 34; 54pp; English.

XX The present sequence is that of a colostrinin constituent peptide  
 CC that is used as an immunological regulator and as a blood cell  
 CC regulator in claimed methods of the invention. The peptide is  
 CC classified as having a beta-casein homologue precursor. Methods  
 CC are claimed for: inducing a cytokine in a cell by contact with an  
 CC immunological regulator, where the cell is present in a cell  
 CC culture, a tissue, an organ or an organism, and the cell is  
 CC mammalian, including human; modulating an immune response in a cell  
 CC by contact with the immunological regulator under conditions

CC effective to induce a cytokine; modulating an immune response in a  
 CC patient by administering an immunological regulator under conditions  
 CC effective to induce a cytokine, where the immunological regulator  
 CC is administered topically or as part of a dietary supplement, and  
 CC where the immune response is specific or non specific, an interferon  
 CC response or an antibody response; modulating blood cell proliferation  
 CC by contacting blood cells with a blood cell regulator, where the  
 CC blood cells are present in a cell culture or an organism, are  
 CC mammalian or human, and where the blood cells are increased in  
 CC number or differentiated; and a method for modulating blood cell  
 CC proliferation in a patent. A claimed cytokine-inducing composition  
 CC comprises a pharmaceutical carrier and an active agent such as the  
 CC present peptide.

XX Promoting cell differentiation in a patient involves use of blood cell  
 PT regulator selected from colostrinin, its constituent peptide and/or  
 PT analog -

PS Claim 7; Page 21; 37pp; English.

XX The invention comprises a method for promoting cell differentiation (e.g.  
 CC neural cell differentiation). The method involves contacting cells with a  
 CC neural cell regulator (i.e. a colostrinin peptide) in order to change the  
 CC cells in morphology to form neural cells. Colostrinin is a proline-rich  
 CC polypeptide aggregate that is present in colostrum. The method of the  
 CC invention is useful for promoting the differentiation of cells and for  
 CC treating damaged neural cells in a patient. The present amino acid  
 CC sequence represents a specifically claimed colostrinin peptide used in

CC the method of the invention.

PT p48 and p46 retinoblastoma binding proteins and corresponding DNA

PT bind to Rb competitively with the SV40 T antigen; for the

PT control, diagnosis and research of cancers.

XX

PS Example 1; Page 40; 102pp; English.

XX

The T peptide is used with K peptide (AAR65235) to isolate p48 protein from HeLa cell isolates by affinity chromatography, as part of a method for cloning the RbAp48 gene from a human HeLa cell cDNA library, followed by sequencing. p48 Supresses heat shock sensitive Ras mutations in yeast and is implicated as a retinoblastoma tumor suppressor. p46 May suppress the oncogene Ras p21 in human tumours. The protein binds to retinoblastoma competitively with the SV40 virus T antigen. DNA encoding p48 may be used as a probe or primer in research, as well as in the diagnosis or prognosis of certain cancers. (Updated on 25-MAR-2003 to correct PN field.)

 PS

XX The present invention relates to novel human cancer-related genes and  
 CC proteins (ABZ78120-ABZ78168 and ABR01789-ABR01861). The genes and  
 CC proteins are useful for eliciting a humoral or cellular immune response.  
 CC The genes are useful as probes and primers for the amplification and/or  
 CC detection of genes, mRNAs or their fragments, as reagents for the  
 CC diagnosis and/or prognosis of cancer, as coding sequences capable of  
 CC directing the expression of the protein, as tools for modulating or  
 CC inhibiting the expression of genes and/or translation of transcripts, and  
 CC as therapeutic agents. The proteins and peptides are useful as  
 CC therapeutic, prognostic and diagnostic reagents for cancer. The present  
 CC sequence is a human leukocyte antigen (HLA) peptide, used in an example  
 CC from the invention.

 XX Disclosure; Column 71; 65pp; English.  
 XX  
 XX The present sequence is a TSG-6 related peptide.  
 CC The present invention relates to TSG-6 antibodies which are  
 CC useful for detecting TSG-6 expression in a biological sample. They  
 CC are useful for measuring the induction of expression of TSG-6 in a  
 CC cell or for identifying a compound capable of inducing the expression  
 CC of TSG-6 in a cell. They are useful for disrupting the action of TSG-6,  
 CC preventing or treating diseases associated with overproduction, or  
 CC inappropriate production/action of TSG-6. They are used to prevent or  
 CC treat diseases such as acute and chronic immune and autoimmune diseases  
 CC (e.g. systemic lupus erythematosus (SLE), rheumatoid arthritis),  
 CC infections or sepsis, inflammatory diseases (e.g. sarcoidosis,  
 CC atherosclerosis), neurodegenerative diseases (e.g. Parkinson's disease,  
 CC multiple sclerosis), malignant pathologies involving TNF-secreting  
 CC tumours (e.g. leukaemia), alcohol induced hepatitis and as well as  
 CC conditions associated with tumour necrosis factor (TNF)-stimulated  
 CC leucocyte adhesion. They are also used to treat cancer.

XX
XX Novel tumor necrosis factor-induced protein or glycoprotein molecule
XX TSG-6 useful for preventing and treating rheumatoid arthritis, or other
XX inflammatory conditions, malignant tumors, and infections
XX
XX Example 14; Page 32; 68pp; English.
XX
XX The invention relates to an isolated tumor necrosis factor-induced
XX protein or glycoprotein molecule TSG-6, or its functional derivative,
XX where the molecule has a sequence which corresponds to at least 10 amino
XX acids of the human TSG-6 sequence appearing as ABG7070. TSG-6 protein is
XX useful for preventing and treating inflammatory conditions (e.g.
XX sarcoidosis, chronic inflammatory bowel disease, ulcerative
XX colitis, atherosclerosis and Crohn's disease), malignant tumors,
XX and infections (e.g. AIDS, acquired immunodeficiency syndrome).
XX Inflammatory conditions include autoimmune pathologies such as rheumatoid
XX arthritis, systemic lupus erythematosus, thyroiditis, graft versus host
XX disease, diabetes mellitus, Grave's disease, infections include
XX bacterial, viral, fungal infections, neurodegenerative diseases,
XX (e.g. multiple sclerosis, Huntington's Chorea and Parkinson's disease)
XX disorders of the motor unit (e.g. Alzheimer's disease), malignant
XX pathologies involving tumor necrosis factor (TNF)-secreting tumours
XX (e.g. leukaemia and lymphomas) and alcohol-induced hepatitis. Many other
XX diseases and disorders are given in the specification. The present
XX sequence represents human Ia1pha1 (trypsin) heavy chain (HC2) N-terminal
XX sequence. Ia1pha1 trypsin was shown to be a binding partner of TSG-6.

 CC proteins are useful for eliciting a humoral or cellular immune response.  
 CC The genes are useful as probes and primers for the amplification and/or  
 CC detection of genes, mRNAs or their fragments, as reagents for the  
 CC diagnosis and/or prognosis of cancer, as coding sequences capable of  
 CC directing the expression of the protein, as tools for modulating or  
 CC inhibiting the expression of genes and/or translation of transcripts, and  
 CC as therapeutic agents. The proteins and peptides are useful as  
 CC therapeutic, prognostic and diagnostic reagents for cancer. The present  
 CC sequence is a human leukocyte antigen (HLA) peptide, used in an example  
 CC from the invention.

CC The present invention relates to novel human cancer-related genes and proteins (ABZ78120-ABZ78168 and ABR01789-ABR01861). The genes and proteins are useful for eliciting a humoral or cellular immune response.  
CC The genes are useful as probes and primers for the amplification and/or detection of genes, mRNAs or their fragments, as reagents for the diagnosis and/or prognosis of cancer, as coding sequences capable of directing the expression of the protein, as tools for modulating or inhibiting the expression of genes and/or translation of transcripts, and as therapeutic agents. The proteins and peptides are useful as CC therapeutic, prognostic and diagnostic reagents for cancer. The present CC sequence is a human leukocyte antigen (HLA) peptide, used in an example CC from the invention.

XX PT Inhibiting site-specific SH2 domain interaction - with peptide
XX PT containing phosphotyrosine or phosphotyrosine mimic
XX PS
XX PS Disclosure; Column 71; 70pp; English.
XX CC A method has been developed of inhibiting a site-specific interaction
XX CC between a first molecule having an SH2 domain and a second molecule that
XX CC interacts with the SH2 domain. The method comprises contacting the first
XX CC molecule with a 4- to 30-mer peptide containing a sequence of formula:
XX CC R1-Met-R3-Met (I), where R1 = phosphotyrosine (pTyr) or a
XX CC phosphotyrosine analogue having a hydrolysis-resistant phosphorous
XX CC moiety, and R3 = any amino acid. AAW78501 to AAW78523 represent
XX CC specifically claimed examples of the peptides described. The peptides are
XX CC useful for modulating both cellular growth to control unwanted cell
XX CC proliferation in e.g. selected malignancies and for metabolic control in
XX CC e.g. diabetes, by inhibiting signal transduction molecules such as
XX CC protein tyrosine kinases (PTKs) which include growth factor receptors,
XX CC proto-oncogene and oncogene products and the insulin receptor. The
XX CC peptides are also useful for treating and for studying the enzymatic
XX CC mechanisms of PTPase activity and the metabolic and biochemical roles of
XX CC PTPases. AAW78524 to AAW78702 represent other peptides given in the
XX CC present invention, but which are not specifically claimed.

 XX PS  
 XX PS Example 8; Page 50; 106pp; English.  
 XX CC AAR58755 is a wild type T-antigen peptide contg. amino acids 102-114,  
 XX CC which has been show to bind PRB (retinoblastoma protein). This peptide  
 XX CC competed effectively with PRB binding to MyoD, whereas AAR58757, an  
 XX CC equivalent peptide contg. a single substitution has no binding with  
 XX CC PRB. MyoD does not however contain the highly conserved PRB-binding  
 XX CC motif (AAR58756) that is essential for PRB-binding of large T, E1A and  
 XX CC E7 proteins. It is concluded that MyoD interacts with PRB in a specific  
 XX CC manner that is competed by T-antigen, and that involves the bHLH and  
 XX CC pocket domains respectively, of these two molecules. MyoD effects on  
 XX CC the cell cycle and PRB on the myogenic pathway result from direct  
 XX CC binding of the 2 molecules with each other. The method can be used for  
 XX CC the regeneration of tissue, eg. muscle tissue, in eg. mammals.  
 XX CC (See also AAR58756-8 and AAO67372).

XX PT New polynucleotide encoding a human G-protein coupled receptor for  
 XX PT preventing, treating, or ameliorating e.g. an inflammatory,  
 XX PT reproductive, pulmonary, renal connective tissue, or endocrine disorder  
 XX PS  
 XX PS Disclosure; Page 43; 356pp; English.  
 XX CC The present invention describes a human G protein coupled receptor  
 XX CC (GPCR), designated HGPRBMY27 (I). (I) has antiinflammatory,  
 XX CC antiinfertility, pulmonary, cytotstatic, nephrotropic, hormonal and  
 XX CC circulatory activities, and can be used in gene therapy. (I) or the  
 XX CC protein encoded by it can be used to prevent, treat, or ameliorate a  
 XX CC medical condition, such as inflammatory disorders, reproductive a  
 XX CC disorders, pulmonary disorders, cancer, renal disorders, connective  
 XX CC tissue disorders, endocrine disorders, or disorders involving  
 XX CC aberrations in tubular tissues. They can also be used to diagnose a  
 XX CC pathological condition or a susceptibility to (I). The protein can  
 XX CC be used to screen for candidate compounds capable of modulating activity  
 XX CC of a GPCR polypeptide. The present sequence represents a PKC  
 XX CC phosphorylation site peptide from human HGPRBMY27, which is given in the  
 XX CC exemplification of the present invention.

PT Novel ubiquitin conjugating enzyme polypeptide isolated from activated  
PT human T cell, for screening modulators useful for treating cancer,  
PT immune disorder, lymphoproliferative disorder, neurodegenerative  
PT disorder -  
XX  
PS Disclosure; Page 90; 169pp; English.  
XX  
XX The invention relates to a novel ubiquitin conjugating enzyme (UBC)  
CC homologue, RAU1d6 (regulated in activated T-lymphocytes 1d6) and its  
CC corresponding nucleic acid. The invention also relates to methods for  
CC treating, diagnosing, preventing and screening for disorders related  
CC to the expression of RAU1d6. UBC is useful for screening for candidate  
CC compounds capable of binding to and/or modulating its activity. UBC is  
CC useful for treating an immune or neuronal disorder in a mammal. The  
CC method is useful for treating a cancer or tumour. It is useful for  
CC suppressing the immune response in a subject requiring the suppression.  
CC It is also useful for treating lymphoproliferative disorder, cancer e.g.  
CC adenocarcinoma, leukaemia, myeloma, sarcoma, etc, neurodegenerative  
CC disorder, inflammatory disorders e.g. rheumatoid arthritis, asthma,  
CC multiple sclerosis, psoriasis, etc, neuronal disorders e.g. Alzheimer's  
CC disease, dementia, depression, epilepsy, etc, immune disorder or immune  
CC related disorders such as acquired immuno deficiency syndrome (AIDS),  
CC allergy, anaemia, atopic dermatitis, diabetes mellitus, myocardial  
CC infarction, etc, developmental disorders e.g. Cushing's syndrome, renal  
CC tubular acidosis, gonadal dysgenesis, dysplasia, cataract, etc. The  
CC present sequence is human RAU1d6 casein kinase II phosphorylation  
CC site.

XX PT New composition comprising a substance that modulates the structure of  
XX proteins and polynucleotides, useful for therapeutic, prognostic and  
XX diagnostic reagents for eliciting cellular or humoral immune response  
XX in cancer patients -

XX PS Claim 13; Page 561; 1021pp; English.

XX CC The present invention relates to novel human cancer-related genes and  
XX proteins (ABZ78120-ABZ78168 and ABR01789-ABR01861). The genes and  
XX proteins are useful for eliciting a humoral or cellular immune response.  
XX The genes are useful as probes and primers for the amplification and/or  
XX detection of genes, mRNAs or their fragments, as reagents for the  
XX diagnosis and/or prognosis of cancer, as coding sequences capable of  
XX directing the expression of the protein, as tools for modulating or  
XX inhibiting the expression of genes and/or translation of transcripts, and  
XX as therapeutic agents. The proteins and peptides are useful as  
XX therapeutic, prognostic and diagnostic reagents for cancer. The present  
XX sequence is a human leukocyte antigen (HLA) peptide, used in an example  
XX from the invention.

 XX New composition comprising a substance that modulates the structure of  
 PT proteins and polynucleotides, useful for therapeutic, prognostic and  
 PT diagnostic reagents for eliciting cellular or humoral immune response  
 PT in cancer patients -  
 XX  
 PS Claim 13; Page 605; 1021pp; English.

XX The present invention relates to novel human cancer-related genes and  
 CC proteins (ABZ78120-ABZ78168 and ABR01789-ABR01861). The genes and  
 CC proteins are useful for eliciting a humoral or cellular immune response.  
 CC The genes are useful as probes and primers for the amplification and/or  
 CC detection of genes, mRNAs or their fragments, as reagents for the  
 CC diagnosis and/or prognosis of cancer, as coding sequences capable of  
 CC directing the expression of the protein, as tools for modulating or  
 CC inhibiting the expression of genes and/or translation of transcripts, and  
 CC as therapeutic agents. The proteins and peptides are useful as  
 CC therapeutic, prognostic and diagnostic reagents for cancer. The present  
 CC sequence is a human leukocyte antigen (HLA) peptide, used in an example  
 CC from the invention.

 XX PT New isolated human genes and the secreted polypeptides they encode  
 XX useful in, e.g. treatment of Alzheimer's  
 XX Disclosure; Page 370; 393pp; English.  
 XX CC This invention describes novel human genes (see AA200410-200477) and the  
 CC secreted proteins (see AAY25711-Y25778) and fragments (see  
 CC AAY25779-Y25907) they encode. The polynucleotides and their corresponding  
 CC secreted polypeptides are useful for preventing, treating or ameliorating  
 CC medical conditions e.g. by protein or gene therapy. Also pathological  
 CC conditions can be diagnosed by determining the amount of the new  
 CC polypeptides in a sample or by determining the presence of mutations in  
 CC the new polynucleotides. Specific uses are described for each of the 67

CC polynucleotides of the invention, based on which tissues they are most  
 CC highly expressed in, and include developing products for the diagnosis  
 CC or treatment of cancer, tumours, neurodegenerative disorders,  
 CC developmental abnormalities and fetal deficiencies, blood disorders,  
 CC leukemias, diseases of the immune system, autoimmune diseases, hepatic  
 CC and renal disease, inflammation, allergies, ischaemic shock, Alzheimer's  
 CC and cognitive disorders, schizophrenia, restenosis, cardiovascular  
 CC disorders, wound healing, stroke, arthritis, obesity, asthma, sepsis,  
 CC acne, psoriasis, transplant rejection, metabolic disorders, infections  
 CC and AIDS. The polypeptides are also useful for identifying their binding  
 CC partners.

XX

cancer or autoimmune diseases -

XX

Claim 1; Fig 2; 523pp; English.

XX

CC

The present invention describes antigenic peptides (I) comprising:

XX

(a) any one of 1601 sequences (see ABP82037 to ABP83619) of 12-24 amino

XX

acids. Also described: (1) an assay for the detection of a particular

XX

G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample;

XX

and (2) an isolated antibody having high specificity and high affinity

XX

or avidity for a particular GPCR. (I) can be used as GPCR modulators and

XX

in gene therapy. The antigenic peptides for GPCRs are useful in detecting

XX

an antibody against a particular GPCR, and in the production of specific

XX

antibodies. The peptides and antibodies are also useful for detecting the

XX

presence or absence of corresponding GPCRs. The antigenic peptides for

XX

GPCRs and antibodies are useful for diagnosing and designing drugs for

XX

treating immune-related diseases, growth-related diseases, cell

regeneration-related disease, immunological-related cell proliferative

XX

diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease,

XX

atherosclerosis, bacterial, fungal, protozoan or viral infections,

XX

osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute

XX

inflammation, allergies, Crohn's disease, diabetes, graft versus host

XX

disease, Parkinson's disease, multiple sclerosis, pain, psoriasis,

XX

anxiety, depression, schizophrenia, dementia, mental retardation, memory

XX

loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, or

XX

hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or

XX

any other disorder in which GPCRs are involved. The antibodies may be

XX

used in immunoassays and immunodiagnoses. AB242523 to AB242869 encode

XX

GPCR proteins given in ABP81675 to ABP82018, which are used in the

XX

exemplification of the present invention.

 PT to treat angiogenic disorders e.g. cancer, macular degeneration and  
 PT arthritis -  
 XX

PS Example 1; Page 16; 34pp; English.

XX The present invention relates to conjugated kringle peptide fragments  
 CC consisting of a functionalised kringle peptide fragment chemically  
 CC coupled to a functionalised polymer. The conjugated kringle peptides  
 CC may be administered to a patient for treating angiogenesis-associated  
 CC diseases such as psoriasis, cancer, arthritis, macular degeneration,  
 CC diabetic retinopathy and for inhibiting endothelial cell proliferation.  
 CC The present DNA sequence is a peptide used to generate kringle fusion  
 CC proteins comprising a kringle 5 peptide fragment. This peptide is used  
 CC to construct PET32-kan-EK-SLPD-K5, PET32-kan-EK-SEED-K5, PET32-kan-Tev-  
 CC SEED-K5 in the exemplification of the invention.

XX Oral compens. contg. a phosphopeptide - with addn. of an anionic  
 CC polymeric stabiliser to inhibit destabilisation in the oral  
 CC environment

XX Claim 6; Page 17-18; 18pp; English.

XX The sequences given in AAR31237-42 represent phosphopeptides which  
 CC were used as the active agents in an oral composition. These  
 CC peptides were stabilised by an anionic polymeric stabiliser. The

CC anionic polymers were chosen from a group consisting of carboxylate  
 CC polymers, sulfonate polymers, polymers having both a carboxylate and  
 CC a sulfonate moiety, and other such mixtures. The anionic polymeric  
 CC stabiliser inhibits destabilisation of the phosphopeptide in the oral  
 CC environment. These oral compositions, pref. containing a fluoride  
 CC source may be used for inhibiting caries and gingivitis.

 XX Fusion polypeptide for generating libraries of cyclic peptides in vivo,  
 PT comprises terminal intein motifs and a random peptide -  
 XX Disclosure; Fig 12C-1; 115pp; English.  
 PS  
 XX The present invention relates to methods and compositions utilising  
 CC inteins to generate libraries of cyclic peptides in vivo. The  
 CC compositions of the invention are useful for making cyclic peptides  
 CC in vivo. Libraries of cells can be transformed with libraries of  
 CC fusion nucleic acids. Intein-catalysed cyclic peptide libraries are  
 CC useful for screening for an altered phenotype and identifying target  
 CC molecules. The library is introduced into a cell, screened for an  
 CC altered phenotype and target molecules that bind to the cyclic peptide  
 CC are isolated. The method is useful for making cyclic peptides which  
 CC retain biological activity, and for screening for cyclic peptides  
 CC capable of altering the phenotype of a cell. The cyclic peptides are  
 CC useful for altering cellular phenotypes and/or physiology, in screening  
 CC assays to identify target molecules associated with changes in cellular

CC phenotype or physiology and as drugs to treat a number of disease  
 CC state, such as cancer, cardiovascular diseases, obesity and  
 CC neurological disorders. The bioactive cyclic peptide is useful as the  
 CC starting point for designing/synthesising derivative molecules with  
 CC similar or more favourable properties for use as a drug and to pull out  
 CC target molecules. By introducing random libraries into any tumour cell,  
 CC peptides which induce apoptosis, cell death, loss of cell division or  
 CC decreased cell growth can be identified and this method is useful in  
 CC cancer applications. The methods are also useful in cardiovascular  
 CC applications, to screen for diminished arrhythmia potential in  
 CC cardiomyocytes, for enhanced contractile properties of cardiomyocytes  
 CC and diminish heart failure potential and to identify agents that  
 CC regulate the intracellular and sarcolemmal calcium cycling in  
 CC cardiomyocytes to prevent arrhythmias and agents that diminish embolic  
 CC phenomena in arteries and arterioles leading to stroke. Candidate  
 CC bioactive peptide libraries are inserted into these cell types and  
 CC their proliferation in response to specific stimuli is monitored.  
 CC Furthermore, the methods are also useful in screening for decreases in  
 CC atherosclerosis, in screens to regulate obesity by controlling food  
 CC intake mechanisms or reducing the responses of the receptor signalling  
 CC pathways that regulate metabolism, in neurobiology applications, to  
 CC screen for agonists of bone morphogenetic proteins, in skin biology  
 CC applications, including viral and bacterial infection, to screen for  
 CC cyclic peptides which block HIV-1 infection, regulation or inhibition  
 CC of keloid formation and wound healing for diabetic ulcers. Candidate  
 CC libraries are inserted into skin connective tissue cells and bioactive  
 CC peptides which promote the growth of these cells are isolated.  
 CC Further applications include screening for bioactive peptides that  
 CC block antibiotic transport mechanisms, drug toxicities and drug  
 CC resistance, improving the performance of existing or developmental  
 CC drugs, and in biotechnology. The present sequence represents a  
 CC peptide associated with intein catalysed cyclisation of inverted  
 CC loop 3 of GFP.

XX Novel nucleic acids encoding antigenic polypeptides of Cryptosporidium  
PT useful in antigenic preparations for immunizing animals against  
PT Cryptosporidium -

XX Example; Page 25; 72pp; English.

PS The invention relates to Cryptosporidium parvum S60 potential vaccine  
XX antigen and its corresponding DNA molecule. S60 antigens are used in  
CC vaccine preparations for immunizing animals, preferably human, against  
CC Cryptosporidium. The S60 protein is processed into two glycoproteins  
CC S15 and S45. This S45 and S15 glycoproteins behave as a single membrane  
CC glycoprotein S60. S60 vaccine antigen is used for treating intestinal  
CC infections such as diarrhoea in immunosuppressed patients e.g., AIDS  
CC (Acquired Immune Deficiency Syndrome), cancer patients and recipients  
CC of transplants. The present sequence is Cryptosporidium parvum N-terminal  
CC S15 glycoprotein fragment related to the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

RT "Purification and characterization of a novel glutathione S-
RT transferase from Asaphis dichotoma.";
RL Arch. Biochem. Biophys. 403:202-208(2002).
CC -1- FUNCTION: Has a strong specific activity toward 1-chloro-2,4-
CC dinitrobenzene and etharynic acid.
CC -1- CATALYTIC ACTIVITY: RX + glutathione = HX + R-S-glutathione.
CC -1- SUBUNIT: Homodimer.
CC -1- MASS SPECTROMETRY: MW=23138; METHOD=MALDI.
CC -1- MISCELLANEOUS: In A.dichotoma there are at least two isozymes of
CC glutathione S-transferase.
CC -1- MISCELLANEOUS: Optimal pH is 8.5 with 1-chloro-2,4-dinitrobenzene
CC as the substrate.
CC -1- MISCELLANEOUS: The Km for 1-chloro-2,4-dinitrobenzene and
CC glutathione are 0.68 +/-0.05 and 0.106 +/-0.005 mM, and the Vmax
CC is 0.1446 +/-0.0072 and 0.033 +/-0.002 mmol/min x mg enzyme,
CC respectively.
CC -1- SIMILARITY: BELONGS TO THE GST SUPERFAMILY. SIGMA FAMILY.

CC -!- FUNCTION: MODULATES THE ACTION OF AUXIN, AND MAY FUNCTION AS PLANT
CC GROWTH REGULATOR THAT ALTERS PHYTHORMONE RESPONSES (BY
CC SIMILARITY).
CC -!- DEVELOPMENTAL STAGE: EXPRESSED DURING RHIZOBIUM-INDUCED NODULE
CC FORMATION. IN 4-DAY OLD NODULES IT IS FOUND IN ALL THE CELLS OF
CC THE CENTRE OF THE NODULE PRIMORDIUM AND ALSO OCCURS IN THE REGION
CC OF THE ROOT PERICYCLE FACING THE NODULE PRIMORDIUM. AT DAY 5,

EXPRESSON IS SEEN IN THE COMPLETE CENTRAL TISSUE. AT DAY 20
EXPRESSED IN THE COMPLETE PREFIXATION ZONE II, AND IN THE PROXIMAL
PART OF THIS ZONE IT IS FOUND ONLY IN THE INFECTED CELLS BUT NOT
IN THE UNINFECTED CELLS. AT THE TRANSITION OF PREFIXATION ZONE II
INTO INTERZONE II-III EXPRESSION DECREASES IN THE INFECTED CELLS.
IN THE FIXATION ZONE III, EXPRESSION IS INDUCED IN THE UNINFECTED
CELLS AND IN THE PROXIMAL PART OF THIS ZONE IT IS UNDETECTABLE.
PRESENT AT HIGH LEVELS IN THE PERICYCLE OF THE NODULE VASCULAR
BUNDLE.

 PT Inducing a cytokine and modulating an immune response, useful for  
 PT treating central nervous system diseases and bacterial and viral  
 PT infections, comprises administering colostrinin as an immunological  
 PT regulator -  
 XX  
 PS Claim 1; Page 34; 50pp; English.  
 XX  
 CC Sequences AAB72246 - AAB72275 represent peptides derived from colostrinin,  
 CC a proline rich polypeptide aggregate contained in colostrum. The  
 CC peptides have immune response modulatory activity, and are capable of  
 CC inducing cytokines. Colostrinin and its derived peptides are useful for  
 CC inducing cytokine production, for modulating an immunological response  
 CC and for inducing blood cell proliferation. The peptides are useful in the  
 CC treatment of disorders of the central nervous system, neurological  
 CC disorders, mental disorders, dementia, neurodegenerative diseases,  
 CC Alzheimer's disease, motor neurone disease, psychosis, neurosis, chronic  
 CC disorders of the immune system, bacterial and viral infections and  
 CC acquired immunological deficiencies.

 PT Modulating oxidative stress level in a cell, involves contacting the  
 PT cell with an oxidative stress regulator selected from colostrinin, its  
 PT constituent peptide, analog or their combinations -  
 XX  
 PS Claim 6; Page 25; 48pp; English.  
 XX  
 CC The present invention relates to a method for modulating the oxidative  
 CC stress level in a cell or a patient, comprising contacting the cell with,  
 CC or administering to the patient, an oxidative stress regulator selected  
 CC from colostrinin, or its constituent peptide (e.g. the present peptide),  
 CC to change the level of an oxidising species in the cell. The method can  
 CC be used to treat oxidative damage to skin, by decreasing or preventing an  
 CC increase in the level of damage to a biomolecule of the patient.

 XX Peptides having an N-terminal amino acid sequence isolated from

CC after a premature birth or normal birth, preventing/delaying aging in a  
 CC patient, enhancing wound healing, and the reduction of side effects of  
 CC cosmetic procedures. The method changes the level of an oxidising species  
 CC in the cell, such as decreases or prevents increase in the level of  
 CC damage to a biomolecule of the patient selected from DNA, protein and/or  
 CC lipid, compared to the same conditions when the oxidative stress  
 CC regulator is not present. The modulation of oxidative stress results in  
 CC enhanced repair, regeneration, and replacement of cells, tissues and  
 CC organs (e.g. kidney, liver, pancreas, skin, and the other internal and  
 CC external organs), as well as enhanced preservation of such organs for  
 CC transplantation, implantation, or scientific research. The present  
 CC sequence is a colostrinin constituent peptide.

XX Modulation of blood cell proliferation in a patient involves use of  
 PT blood cell regulator selected from colostrinin, its constituent peptide  
 PT and/or analogue

XX Claim 1; Page 34; 54pp; English.

XX The present sequence is that of a colostrinin constituent peptide  
 CC that is used as an immunological regulator and as a blood cell  
 CC regulator in claimed methods of the invention. The peptide is  
 CC classified as having a beta-casein homologue precursor. Methods  
 CC are claimed for: inducing a cytokine in a cell by contact with an  
 CC immunological regulator, where the cell is present in a cell  
 CC culture, a tissue, an organ or an organism, and the cell is  
 CC mammalian, including human; modulating an immune response in a cell  
 CC by contact with the immunological regulator under conditions

CC effective to induce a cytokine; modulating an immune response in a  
 CC patient by administering an immunological regulator under conditions  
 CC effective to induce a cytokine, where the immunological regulator  
 CC is administered topically or as part of a dietary supplement, and  
 CC where the immune response is specific or non specific, an interferon  
 CC response or an antibody response; modulating blood cell proliferation  
 CC by contacting blood cells with a blood cell regulator, where the  
 CC blood cells are present in a cell culture or an organism, are  
 CC mammalian or human, and where the blood cells are increased in  
 CC number or differentiated; and a method for modulating blood cell  
 CC proliferation in a patent. A claimed cytokine-inducing composition  
 CC comprises a pharmaceutical carrier and an active agent such as the  
 CC present peptide.

XX Promoting cell differentiation in a patient involves use of blood cell  
 PT regulator selected from colostrinin, its constituent peptide and/or  
 PT analog

XX Claim 7; Page 21; 37pp; English.

XX The invention comprises a method for promoting cell differentiation (e.g.  
 CC neural cell differentiation). The method involves contacting cells with a  
 CC neural cell regulator (i.e. a colostrinin peptide) in order to change the  
 CC cells in morphology to form neural cells. Colostrinin is a proline-rich  
 CC polypeptide aggregate that is present in colostrum. The method of the  
 CC invention is useful for promoting the differentiation of cells and for  
 CC treating damaged neural cells in a patient. The present amino acid  
 CC sequence represents a specifically claimed colostrinin peptide used in

CC the method of the invention.

PS Claim 3; Page 26; 36pp; English.

CC AAW63620 and AAW63621 are peptide epitopes from the human histidine decarboxylase (HDC) which are used in a method for detecting a mammal having, or at risk of having, melanoma. The antibodies (Abs) can be used in methods for detecting or determining the amount of histidine decarboxylase in a mammalian physiological sample. The Abs can also be used to detect cancer, especially leukaemia or melanoma, in a mammal at risk or afflicted with cancer. Kits for detecting histidine decarboxylase in cells, and for detecting melanoma are also included.

XX Composition useful for treating and diagnosing cancer, comprises stress protein-peptide complexes associated with tumor, and isolated antigen-binding fragments of an antibody that binds specifically to the complex -

PS Example 4; Page 101; 154pp; English.

XX The present invention describes a composition (I) comprising stress protein-peptide complexes (SPPC) associated with tumours that is specifically immunogenically cross-reactive with cell surface-associated SPPCs specific to target cancer (TC). Also described is an isolated antigen-binding fragment of an antibody that binds specifically to SPPCs or a population of different SPPCs consisting of immunogenic cancer cell surface-associated SPPC of TC. (I) has cytostatic activity and can be used in vaccine production and as a tumour-specific immunogenic response inducer. (I) is useful for treating 71 types of cancers or tumours in a subject, such as astrocytoma, fibrosarcoma, myxosarcoma, liposarcoma, CC

CC oligodendroglioma, ependymoma, medulloblastoma, and primitive neural ectodermal tumour (PNET). (I) is useful as cancer immunogen including vaccines. (I) is useful for diagnostic and palliative use, for detecting or imaging cancer cells, and to monitor the course of amelioration of malignancy in an individual. AAM43707 to AAM47109 represent peptides which are used in the exemplification of the present invention.

 CC SPPCs specific to target cancer (TC). Also described is an isolated  
 CC antigen-binding fragment of an antibody that binds specifically to SPPCs  
 CC or a population of different SPPCs consisting of immunogenic cancer cell  
 CC surface-associated SPPC of TC. (I) has cytostatic activity and can be  
 CC used in vaccine production and as a tumour-specific immunogenic response  
 CC inducer. (I) is useful for treating 71 types of cancers or tumours in a  
 CC subject, such as astrocytoma, fibrosarcoma, myxosarcoma, liposarcoma,  
 CC oligodendroglioma, ependymoma, medulloblastoma, and primitive neural  
 CC ectodermal tumour (PNET). (I) is useful as cancer immunogen including  
 CC vaccines. (I) is useful for diagnostic and palliative use, for detecting  
 CC or imaging cancer cells, and to monitor the course of amelioration of  
 CC malignancy in an individual. AAM43707 to AAM47109 represent peptides  
 CC which are used in the exemplification of the present invention.

XX Composition useful for treating and diagnosing cancer, comprises stress  
 PT protein-peptide complexes associated with tumor, and isolated  
 PT antigen-binding fragments of an antibody that binds specifically to the  
 PT complex -

XX Example 4; Page 109; 154pp; English.

XX The present invention describes a composition (I) comprising stress  
 CC protein-peptide complexes (SPPC) associated with tumours that is  
 CC specifically immunogenically cross-reactive with cell surface-associated  
 CC SPSCs specific to target cancer (TC). Also described is an isolated  
 CC antigen-binding fragment of an antibody that binds specifically to SPSCs  
 CC or a population of different SPSCs consisting of immunogenic cancer cell  
 CC surface-associated SPSC of TC. (I) has cytostatic activity and can be  
 CC used in vaccine production and as a tumour-specific immunogenic response  
 CC inducer. (I) is useful for treating 71 types of cancers or tumours in a  
 CC subject, such as astrocytoma, fibrosarcoma, myxosarcoma, liposarcoma,  
 CC oligodendroglioma, ependymoma, medulloblastoma, and primitive neural  
 CC ectodermal tumour (PNET). (I) is useful as cancer immunogen including  
 CC vaccines. (I) is useful for diagnostic and palliative use, for detecting  
 CC or imaging cancer cells, and to monitor the course of amelioration of  
 CC malignancy in an individual. AAM43707 to AAM47109 represent peptides  
 CC which are used in the exemplification of the present invention.

 CC for treating a disease, e.g. cancer, arthritis, diabetes, inflammatory  
 CC disease, atherosclerosis, autoimmune disease, bacterial infection, viral  
 CC infection, cardiovascular disease or degenerative disease. The peptide is  
 CC also useful for inducing apoptosis, particularly to a subject with  
 CC leukaemia, cancer, arthritis, diabetes, cardiovascular disease,  
 CC inflammation or macular degeneration. Furthermore, the peptide is useful  
 CC for diagnosing the diseases cited above. Targeting peptides of the  
 CC invention can also be used to deliver an agent to a foetus, by attaching  
 CC a peptide to the agent and administering the peptide to a pregnant  
 CC subject. Sequences ABG60326-ABG60574 represent selective targeting  
 CC peptides of the invention.

XX Inducing a cytotoxic T lymphocyte response - by maintaining a level
XX of antigen in the lymphatic system of a mammal so as to provide a
XX sustained CTL response, used to treat, e.g. AIDS
XX
XX Disclosure; Page 27; 199pp; English.
XX
XX The present invention describes a method of inducing and/or sustaining
XX an immunological cytotoxic T lymphocyte (CTL) response in a mammal. The
XX method comprises: (a) delivering an antigen to the mammal at a level to
XX induce an immunological CTL response in the mammal; and (b) maintaining
XX the level of the antigen in the mammal's lymphatic system to maintain
XX the immunologic CTL response. The method can be used for the delivery of
XX e.g. a differentiation antigen, a tumour-specific multilineage antigen,
XX an embryonic antigen, an oncogene antigen, a mutated tumour-suppressor
XX gene antigen, or a viral antigen. They can be used for the treatment of
XX disease such as cancer, e.g. malignant melanoma or infectious disease,
XX e.g. viral disease such as hepatitis or AIDS. Sustained antigen delivery
XX to the lymphatic system provides for potent CTL stimulation that takes
XX place in the milieu of the lymphoid organ, and it sustains stimulation
XX that is necessary to keep CTL active, cytotoxic and recirculating
XX through the body. AAY10071 to AAY10639 represent examples of peptide
XX antigens given in the present invention.

XX Assessing an immune response against a selected agent in an individual
XX comprises accelerating a particulate composition, containing an
XX immunogenic compound from a selected agent, into the target skin site
XX of the individual -
XX
XX Disclosure; Page 23; 41pp; English.
XX
XX The invention relates to a method of using an immunogenic compound from
XX a selected agent in the manufacture of a particulate composition for
XX assessing an immune response against the selected agent in an
XX individual. The method comprises: (a) accelerating the particulate
XX composition into a target skin site in the individual; and (b) assessing
XX the target site to determine the presence or absence of a localized skin
XX immune reaction, where the presence of the immune reaction is indicative
XX of an immune response against the selected agent. Peptides
XX AAY83916-Y83925 represent examples of peptides that could be used if the
XX method is used to detect human immunodeficiency virus type 1 (HIV-1). The
XX method is useful for assessing immunocompetence, antibody and cell
XX mediated immunity, antigen exposure, or allergic conditions in an
XX individual.

 XX Vaccine for immunizing against human immunodeficiency virus has mixture  
 PT or linear array of peptides comprising immunodominant T-helper epitopes  
 PT and major histocompatibility complex cytotoxic T-lymphocyte epitopes -  
 XX  
 XX Disclosure; Page 27; 33pp; English.  
 PS  
 XX The present invention relates to human immunodeficiency virus (HIV)  
 CC and in particular to a human leukocyte antigen (HLA)-based HIV vaccine.  
 CC The vaccine comprises a mixture or linear array of peptides, or its  
 CC variants, where the peptides contain immunodominant T-helper (Th)  
 CC epitopes and major histocompatibility complex (MHC) cytotoxic T-  
 CC lymphocyte (CTL) epitopes and the linear array of peptides are  
 CC preferably expressed in modified Vaccinia ankara. The vaccine is useful  
 CC for immunising a patient against HIV and focuses immune response on many  
 CC dominant and subdominant CTL epitopes of HIV. DNA or live vectors with  
 CC linear arrays of CTL epitopes can be used as either primes or boosts of  
 CC peptides or of each other to optimally give CTL anti-HIV responses. The  
 CC vaccine induces salutary anti-HIV immune responses. AAU12447-AAU12558  
 CC represent the amino acid sequences of the Th-CTL epitopes and HIV  
 CC immunogenic peptides used in the invention.

 XX New Major Histocompatibility Complex (MHC) molecule construct, useful  
 PT for treating, preventing, stabilizing or alleviating a disease  
 PT involving MHC recognizing cells e.g., cancer  
 XX  
 PS Disclosure; Figure 37; 304pp; English.  
 XX  
 CC This invention relates to a new Major Histocompatibility Complex (MHC)  
 CC molecule construct comprising a carrier molecule to which one or more  
 CC MHC molecules are attached either directly or via one or more entities.  
 CC The construct of the invention may have cytostatic, antiinflammatory,  
 CC dermatological, antitumor, antidiabetic, anti-HIV, virucide,  
 CC antiparasitic, antitumor, antirheumatic, antiarthritic,  
 CC antipsoriatic and immunosuppressive activities and may be used in gene  
 CC therapy. The MHC molecule construct is useful as a therapeutic  
 CC composition in vivo or ex vivo therapy, for treating, preventing,  
 CC stabilising or alleviating a disease involving MHC recognising cells,  
 CC for monitoring MHC recognising cells or establishing a prognosis of a  
 CC disease or diagnosing a disease, or determining the status of a disease  
 CC or the effectiveness of a medicament against a disease, involving MHC  
 CC recognising cells, e.g., chronic inflammatory bowel disease such as  
 CC Crohn's disease or ulcerative colitis, scleroderma, type I diabetes,  
 CC rheumatoid arthritis, psoriasis, atopic dermatitis, asthma, malignant  
 CC melanoma, renal carcinoma, breast cancer, lung cancer, cancer of the  
 CC uterus, cervical cancer, prostate cancer, brain cancer, head and neck  
 CC cancer, leukaemia, cutaneous lymphoma, hepatic carcinoma, colorectal  
 CC cancer, bladder cancer, rejection-related disease, Graft-versus-host-  
 CC related disease, or a viral disease associated with hepatitis, Acquired  
 CC Immunodeficiency Syndrome (AIDS), measles, pox, chicken pox, rubella or  
 CC herpes. The MHC molecule construct is also useful for flow cytometry,  
 CC histology or cytology. The present sequence represents a peptide  
 CC used to create the MHC molecule construct of the invention.

 XX Inducing or sustaining immunological cytotoxic T lymphocyte response in  
 PT a mammal, useful for treating a mammal with malignant tumour or  
 PT infectious disease, by directly administering an antigen to the  
 PT lymphatic system of the mammal  
 XX  
 XX Disclosure; Page 21; 73pp; English.  
 PS  
 XX The invention relates to a method of inducing and/or sustaining an  
 CC immunological cytotoxic T lymphocyte (CTL) response in a mammal  
 CC comprising administering directly to the lymphatic system of the mammal:  
 CC (a) an antigen in the form of a polypeptide; (b) a vector comprising a  
 CC nucleic acid encoding the antigen; or (c) a non-peptide antigen. The  
 CC method is useful for inducing and/or sustaining CTL response in a mammal.  
 CC This is particularly useful for treating a mammal having a malignant  
 CC tumour (e.g. carcinoma, melanoma, leukaemia or lymphoma) or infectious  
 CC disease (e.g. hepatitis, acquired immune deficiency syndrome (AIDS),  
 CC malaria, measles or tuberculosis), or in an animal having a  
 CC predisposition to these diseases. The mammal may be dogs, cats, mice,  
 CC cattle, sheep, pigs, goats, rabbits, or preferably humans.  
 CC ABG79753-ABG80319 represent viral epitopes on major histocompatibility  
 CC complex (MHC) class I molecules, used in the method of the invention.

 PT Treatment of auto-immune diseases using polypeptide vaccines -  
 PT derived from heat shock or stress proteins of bacterial or other  
 PT pathogens  
 XX  
 PS Disclosure; Page 9; 32pp; English.  
 XX  
 CC The sequences given in AAR25420-1 are peptides which are non-  
 CC homologous to known stress proteins and related antigen sequences.  
 CC They are homologous to part of the P. falciparum 75 kD antigen. These  
 CC peptides are examples of the polypeptides used in the vaccine of the  
 CC invention, which are all derived from stress proteins from infectious  
 CC agent antigens which are related to human stress proteins, but have  
 CC little or no sequence homology within such human stress proteins.  
 CC It has been shown that certain infectious agent antigens are  
 CC closely related in amino acid sequence to human stress proteins,  
 CC and that immune reactions against such antigens can cross react

CC with the human proteins, leading to the possibility of developing  
 CC autoimmune disease. The injection of non-homologous peptides into  
 CC human beings would provide a route of effective vaccination against  
 CC subsequent autoimmune disease induction. The antibodies raised  
 CC through vaccination with these non-homologous peptides are specific  
 CC to the selected infectious agent antigen from which the vaccinating  
 CC peptide was derived.

 XX New peptide(s) based on tumour rejection antigen precursor MAGE-2 -  
 PT which bind HLA-A2 molecules to provoke cytolytic T cell prodn., used  
 PT partic. for treating cancers  
 XX  
 XX Example 3; Page 37; 44pp; English.  
 XX  
 CC Expression of HLA-A2.1 (T2) cells is increased by incubating T2  
 CC cells in medium containing the present peptide. T2 cells will  
 CC present the peptide bound to HLA-A2.1 in high amount and are good  
 CC antigen presenting cells. The claimed MAGE-2 peptides (see AAR80878-  
 CC AAR80888) can induce a similar primary immune response.

XX  
XX Induction of cytolytic T cell production in vivo - by administering  
PT MAGE-2 peptide(s)  
PT  
XX  
XX Example 3; Column 9; 24pp; English.  
XX  
XX This peptide sequence represents a hepatitis B virus reference peptide  
CC used in determining the primary induction of the immune response against  
CC MAGE-2 (a tumour rejection antigen precursor) peptides. Only peptides  
CC AAW36529-39 have the ability to bind to human leukocyte antigen (HLA)  
CC A2.1 molecule with high affinity and are therefore the only candidates of  
CC the MAGE-2 protein to be recognised by human cytolytic T cells (CTL),  
CC because CTL recognise peptides only when bound to HLA molecules.

CC Production of CTL in a subject can be induced by administering a MAGE-2  
CC peptide (particularly AAW36531, AAW36533 and AAW36537) to a subject who  
CC presents HLA-A2 molecules on cells. The method can be used to treat  
CC subjects in need of additional CTL.

XX New preparations of microparticles - comprising a synthetic polymer  
PT matrix and nucleic acid comprising an expression vector for use in  
PT gene therapy  
XX  
XX Disclosure; Page 10; 101pp; English.  
XX  
XX A microparticle preparation (MP) has been developed, consisting of  
CC microparticles having a diameter of less than 100 nm. The MP  
CC comprises: (a) a polymeric matrix (PM) consisting of one or more  
CC synthetic polymers having a solubility in water of less than 1 mg/l; and  
CC (b) an expression vector selected from RNA molecules (at least 50% of  
CC which are closed circles) or circular plasmid DNA (at least 50% of which  
CC are supercoiled). Also described is a MP of at most 20 microns in  
CC diameter, comprising: (a) a PM; and (b) a NAM comprising an expression  
CC control sequence operatively linked to a coding sequence, where the  
CC coding sequence encodes an expression product selected from: (1) a  
CC polypeptide at least 7 amino acids in length, having a sequence identical  
CC to the sequence of: (i) a fragment of a naturally-occurring mammalian  
CC protein; or (ii) a fragment of a naturally-occurring protein from an  
CC infectious agent which infects a mammal; (2) a peptide having a length  
CC and sequence which permits it to bind to an MHC class I or II molecule;  
CC and (3) the polypeptide or the peptide linked to a trafficking sequence.  
CC AAW69763 to AAW69765, and AAW78793 to AAW78897 are peptide fragments for  
CC use in the present invention. The MPs are highly effective vehicles for

CC the delivery of polynucleotides into phagocytic cells. They can be used  
 CC for gene therapy, e.g. for treating genetic diseases, infections or  
 CC tumours or for downregulating an immune response.

 PT separated by peptide spacers that impart hydrophilicity, useful in  
 PT vaccines  
 XX  
 PS Disclosure; Page 21; 35pp; French.  
 XX  
 CC The invention relates to the generation of a lipopeptide comprising at  
 CC least one auxiliary T epitope, at least one cytotoxic T lymphocyte (CTL)  
 CC epitope and at least one lipid residue with (i) the epitopes and lipid  
 CC portion and (ii) the epitopes, being separated independently by peptide  
 CC spacers. These spacers comprise sequences of amino acids which carry an  
 CC overall electrical charge in neutral media to ensure that the  
 CC lipopeptide is hydrophilic. The peptides AAY53301-Y53549 represents  
 CC examples of peptide epitopes used to generate the lipopeptides. These are  
 CC used in therapeutic or prophylactic compositions and vaccines to induce  
 CC specific immune responses against human immunodeficiency, hepatitis B or  
 CC papilloma viruses; p53 of melanoma or the malaria parasite.

 PT New nucleic acid encoding the cancer-associated polypeptide plu-1, for  
 PT diagnosis, treatment and prevention of cancer, especially of breast and  
 PT ovary  
 XX  
 PS Example 2; Fig 12; 173pp; English.  
 XX  
 CC The invention relates to a human cancer-associated polypeptide plu-1.  
 CC The plu-1 polypeptide can be recombinantly expressed by standard  
 CC recombinant methodology. Detection of the plu-1 nucleic acid or the  
 CC polypeptide is used for the following: (i) diagnosis (including imaging)  
 CC and prognosis of, and determination of susceptibility to, cancer,  
 CC specifically ovarian or breast cancer; and (ii) treating cancer (by  
 CC inducing an immune response against cancer cells, e.g. as a vaccine, or  
 CC by antisense inhibition). Antigens derived from the polypeptide are used  
 CC to generate activated cytotoxic T lymphocytes, or dendritic cells, for  
 CC subsequent return to the patient for treatment of cancer. The polypeptide  
 CC may also be used to identify inhibitors of plu-1 activity. Fragments of  
 CC the polypeptide, and antibodies raised against plu-1, are useful as assay  
 CC and imaging agents, also therapeutically (to induce an anti-idiotype  
 CC response or where conjugated to cytotoxic agents). The plu-1 antigen is  
 CC expressed more commonly in breast tumors than some known tumor antigens.  
 CC Sequences AAY55320-629 represent predicted peptides from the plu-1  
 CC polypeptide which may bind to the human class I alleles B27, A2, A3 and  
 CC All.

PT New immunogenic peptides with HLA binding motif, useful in treatment  
XX and diagnosis of cancers and viral diseases  
PS Claim 1; Page 76; 150pp; English.  
XX  
CC AAY45390 to AAY48214 represent specifically claimed immunogenic peptides  
CC having a human major histocompatibility complex (MHC) Class I (also  
CC known as human leukocyte antigen (HLA)) binding motif. The immunogenic  
CC peptides can bind to a specific HLA allele (i.e. HLA-A subtypes  
CC HLA-A2.1, A1, A3.2 or A24.1 or HLA-B or C) and induce a cytotoxic T cell  
CC response against the antigen from which the peptide is derived.  
CC Cytotoxic T lymphocytes (CTLs) which destroy antigen-bearing cells are  
CC normally induced by an antigen in the form of a peptide fragment bound  
CC to a HLA molecule, rather than the intact foreign antigen itself, and  
CC are particularly important in tumour rejection and in fighting viral  
CC infections. The peptides are therefore useful therapeutically to treat  
CC or prevent viral infections and cancers in mammals (especially humans)  
CC e.g. prostate cancer, hepatitis B and C, AIDS, and renal carcinoma.  
CC They can be administered as vaccines to elicit an immune response in  
CC individuals susceptible or otherwise at risk of viral infection or  
CC cancer, or used to treat chronic or acute conditions. They are also  
CC useful diagnostically, and can be used to induce a cytotoxic T cell  
CC response, by contacting a cytotoxic T cell with the peptide e.g. to  
CC produce CTLs ex vivo for infusion back into a patient. The  
CC polynucleotides encoding the immunogenic peptides are also useful  
CC therapeutically and for immunisation as above.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

CC -!- FUNCTION: IS ABLE TO INHIBIT ALL FOUR CLASSES OF PROTEINASES BY A  
CC UNIQUE "TRAPPING" MECHANISM. THIS PROTEIN HAS A PEPTIDE STRETCH,  
CC CALLED THE 'BAIT REGION' WHICH CONTAINS SPECIFIC CLEAVAGE SITES  
CC FOR DIFFERENT PROTEINASES. WHEN A PROTEINASE CLEAVES THE BAIT  
CC REGION, A CONFORMATIONAL CHANGE IS INDUCED IN THE PROTEIN WHICH  
CC TRAPS THE PROTEINASE. THE ENTRAPPED ENZYME REMAINS ACTIVE AGAINST  
CC LOW MOLECULAR WEIGHT SUBSTRATES (ACTIVITY AGAINST HIGH MOLECULAR  
CC WEIGHT SUBSTRATES IS GREATLY REDUCED). FOLLOWING CLEAVAGE IN THE  
CC BAIT REGION A THIOL-ESTER BOND IS HYDROLYZED AND MEDIATES THE  
CC COVALENT BINDING OF THE PROTEIN TO THE PROTEINASE.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
